Our Data Centers

Geographically-dispersed Data Centers located in California, New Jersey, Texas and London.

- SSAE19-audited facilities
 - Multiple diesel generators for back-up power
 - Multiple telco loops and carriers for increased bandwidth and redundancy
 - Advanced physical security protection including biometric scanning, locked cages, video surveillance and motion sensors
 - Multi-level snapshot capability to restore lost or corrupted data
 - Multi-site data and applications replication, eliminating geographically centric events
- 

Documentation

Abacus offers a variety of Business Continuity Planning documentation available to view in the **abacusPortal**, providing you with complete transparency, including Disaster Recovery Test Reports and your Abacus Business Continuity Plan.

abacusPortal

To ensure your firm has complete transparency and control over your technology platform, we provide a suite of compliance-focused tools, including important documents, reports and interfaces. Furthermore, our dedicated software team is constantly developing new features and reporting capabilities.

Dedicated Disaster Recovery Team

At Abacus, you are supported by continuous automated monitoring and a highly experienced, dedicated Disaster Recovery Team with extensive knowledge of the alternative investment industry.

Data Protection & Backups

Each layer of data protection prevents malicious cybersecurity attacks:

- High Availability
- Backups
- Disaster Recovery

Best-of-Breed Technology

At Abacus, we've implemented an innovative multi-vendor storage solution for IT resilience.
