

Providing Expert IT and Security Managed Services for Alternative Investment Firms

Technology

Solutions Developed Around the Specific Needs of the Alternative Investment Management Industry

Best-of-Breed Partners

Our technology is interconnected to be secure and centrally-managed by Abacus on your behalf. We select best-of-breed technology partners that integrate across our platform and support at-scale to give clients the best experience.

Dedicated Engineering Team

Our dedicated engineering team is comprised of individuals who have both industry-specific knowledge and technology subject matter expertise. The engineering team consists of dedicated network engineers, VOIP engineers, infrastructure architects, disaster recovery experts, and DevOps teams.

Under the Hood

How We Select Our Tech Partners

Technical Strength

Abacus partners with industry leaders and technology innovators to bring our clients the best-in-class technology platform.

Security and Control

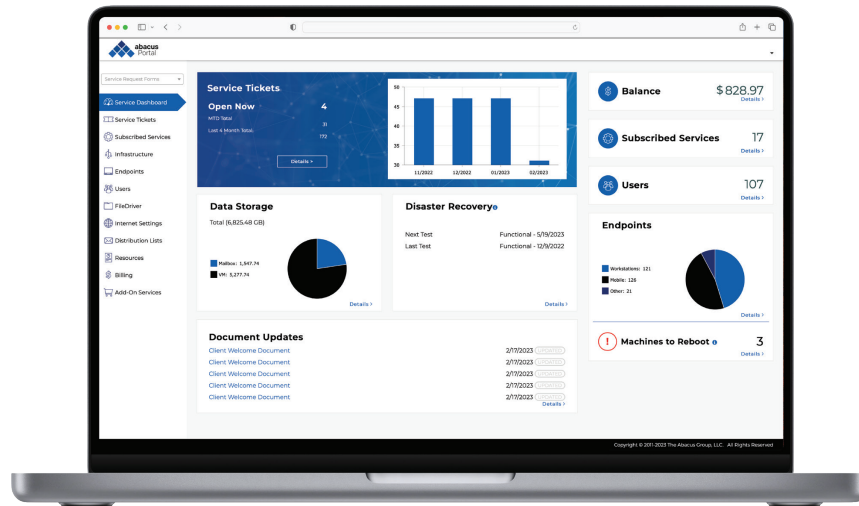

Security is ingrained in our technology solutions and we push our partners to have the best security to pass on to our clients.

Centralized Management

Our platforms utilize centralized management for scale, security, and accountability.

Automation: Built-in to Everything We Do

Automation and scale are central to our technology philosophy and platform at Abacus. We build repeatable solutions and provide insight and management to those systems through our proprietary **abacusPortal**.

What We Support

FIX Connectivity

FIX Connectivity to far sides is integrated into the Abacus Cloud and provides clients with dedicated, highly-available private FIX Connectivity to multiple providers.

Trading Applications

We are experts at managing, maintaining and supporting industry-specific financial applications, including Bloomberg and Thomson Reuters.

Compliance Archiving

Our platform seamlessly integrates with compliance archiving and electronic journaling services from **Smash** and **Global Relay**.

Our Data Centers

Geographically-dispersed Data Centers located in California, New Jersey, Texas and London

- SSAE19-audited facilities
- Multiple diesel generators for back-up power
- Multiple telco loops and carriers for increased bandwidth and redundancy
- Advanced physical security protection including biometric scanning, locked cages, video surveillance and motion sensors
- Multi-level snapshot capability to restore lost or corrupted data
- Multi-site data and applications replication, eliminating geographically-centric events
